I am writing to express my interest in front end development, as advertised. I am excited about the opportunity & to further develop my skills.

I recently completed my 3 years bachelor degree from sunway college. As one path led to another, one missing dot was connected by another. I also learnt many programming languages throughout my college time. Especially Java, but as I entered to learn the spring boot, it led me to frontend languages till then which i had my handful of knowledge only on backend languages & flutter. So, from there my journey to learn the react began & later mern stack as a whole.

Long story short, it has been more than 1.5 years that I have been coding in React & throughout that period I have completed some projects which can be found in my github profile. So, I would be fortunate enough to learn & enhance my skills through this opportunity.

Thank you for considering my application. I am looking forward to the possibility of discussing how my skills and experiences align with the needs of your team. Please find attached my resume for your review. I am available at your earliest convenience for an interview.
